I Piscine **2**

II Instruction **3**

Chapter I

Piscine

What is a piscine?
Much like the selection piscine, the project is split in many smaller projects (modules), and with each day a new notion on the language/paradigm/technology you chose to work on. Validating a piscine requires more than just a day or two of investment. To ensure that this piscine is done correctly, it is recommended that you take note of everything listed below:

- You can't validate the piscine if you work only on one or two projects.
- Trying to turn in every day: even if something isn't finished, it's better to try and turn it in.
- At least one week of work: going into the piscine shouldn't be taken lightly.
- It is possible to retry your modules without waiting.

It is important not to do these modules alone. For this reason it is **highly** recommended to approach these piscines with several students.

Chapter II

Instruction

To validate this piscine you must do the following projects:

- Tensors
- Networks
- Vision
- Sequences
- Ship it

You must validate each project in that order. Indeed, it will not be possible to register for a project if the previous project is not valid.

You must be registered to this project.

It is important to refer to this document to access your projects. You can click on each module on this page to access it or use the list of projects available in your intra.
